

Printix Modern Workplace Printing Extends Universal Print

Save more without compromise

Printix, a Microsoft Azure-hosted cloud service, utilizes the Microsoft Graph API to provision deep and seamless integration with Universal Print, without the need to add connectors, hardware, or complexity.

Extending Universal Print to support all your current printers—inclusive of all makes, models and operating systems—will significantly ease and speed your migration and save you more time. This covers Windows, Mac, Chromebook, iOS and Android.

Printix adds secure print release, print anywhere, and print later office and home print methods, with store and archive of pending documents in your Azure Blob Storage.

Microsoft integrations provided by Printix include Azure AD single sign-on, Microsoft Endpoint Manager to automatically deploy Printix Client, Power BI to create reports, and insight into print usage and support for Windows Virtual Desktop.

Printix with Microsoft 365 single sign-on automatically detects a user's identity, their department or location, and which printers are authorized and configured, so our users are always ready to print.

The ability to add Universal Print to Printix or extend Universal Print with Printix enables every organization to adopt a cloud-managed print service, without compromise.

How it Works

Microsoft Graph API integration connects Printix and Universal Print to a single managed cloud service with extended features, security, management, and reporting.

Add Secure Print Release

Use [Printix App](#) for secure print release of Universal Print jobs. Printix App is available as a web app that runs in a web browser and as a native app for Android and iOS/iPadOS phones and tablets. If [Printix Go](#) is installed on the printer, users can sign in with card or ID code and release documents from the touchscreen control panel of the printer.

Add Mobile Print

Print from phones and tablets, Android and iOS/iPadOS, to Printix-managed printers.

Add Direct IP Print

Print direct to any printer, including UP-compatible printers. Keep documents local and ensure print availability when there is no Internet connection.

About Universal Print by Microsoft

Universal Print is a modern print solution that organizations can use to manage their print infrastructure through cloud services from Microsoft. Universal Print runs entirely on Microsoft Azure. When it's deployed with Universal Print-compatible printers, it doesn't require any on-premises infrastructure. Universal Print is a Microsoft 365 subscription-based service that organizations use to centralize print management through the Universal Print portal.

About Printix

Printix is a market-proven native cloud print solution, hosted on Azure and used today by thousands of organizations globally. As an established Microsoft ISV partner, Printix provides organizations of any size with an extended print management platform and service, without compromise. Printix's solution unifies the administration of all users, devices, and printers and offers options to configure, update and apply specific to each requirement.
