

Chrome Printing For Enterprise

Be more productive for less

A market proven cloud platform for managing print in concert with Google Workspace and Chromebooks. Printix automates connection and management, enabling users to print from anywhere to authorized company printers, **simply and securely**.

Quick Facts

- ✓ Chrome OS 63 or later, SSO with Google Workspace
- ✓ Serverless cloud based infrastructure
- ✓ Support company provisioned and BYOD devices
- ✓ Print from Chromebook, PC, Mac, iOS and Android
- ✓ Mobile and secure, confidential print via Printix App
- ✓ Remote users print via your secure Google Cloud Storage
- ✓ Reports for printing activities, printer usage and print costs.

Fast Track to Cloud Managed Printing

Quickly enable authorized printing from any device without the pain of configuring servers, setting up print queues and drivers. Printix does it all, so users print securely and reliably and business get the insights needed.

Built for Scale

Designed on the same application principles that allow Google to run billions of containers a week, Printix can scale up or down quickly, efficiently and without risk regardless of organization size. A Software as a Service where you only pay for active users, means better budgeting and increased savings, should business circumstances change.

Protect and Secure

Printix meets the exacting requirements of GDPR. Passwords are handled entirely by Google. Documents and communication are encrypted (AES) with a key length of 256 bits and do not leave your network. Secure SNMP3 is supported to collect printer status, toner and paper levels.

Secure Print Anywhere and Print Later ensures confidential and remotely printed documents are not printed until you are ready to release at the printer. Download Printix App.

The missing piece to greater savings and business flexibility

Tighter Integration

Users sign directly into their Google Workspace account, it's that simple. No added Secure LDAP or other needed. Printix works "out of the box".

Enablement and Automation

Using SSO, Printix knows who, where and the printers authorized and available. Print queues are silently installed without IT support and auto updated if the user moves to another location. Users only ever see the printers they need. Smart!

Self-Healing Cloud Service

With no servers or specialized hardware, Printix can restart containers that fail defined health checks, to ensure maximum uptime and resilience of your print service.

How Printix delivers cloud-managed print with Google

Users login to the Chrome browser with their Google Workspace account, open the item to print, select one of the listed available printers, then simply print.

Automatic and reliable printer discovery

Whether mobile, BYOD, or managed device, printers will appear automatically without fail. Printix automates the creation of print queues and installation of print drivers, so you don't have to. Save IT time and effort.

Google Groups

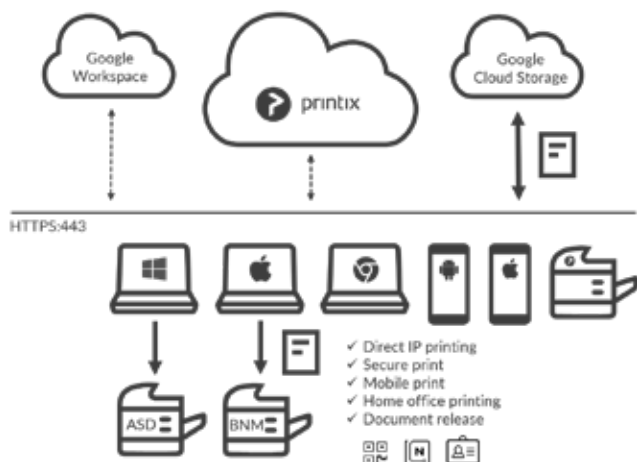

Use Google groups to control access to printers and deploy printers based on users' group membership.

Chromebook printing

Printing from Chromebook is made easy to any network printer managed by Printix. Just install the approved Google Chrome extension to start printing via the cloud.

Google Integration

Google Workspace

Google Workspace integration

As a Google Workspace administrator, you can enable Google SSO to authenticate users with their unique Google credentials. No added database or users configuration needed.

MSI

Google Workspace Admins can easily deploy Printix Client to users within their Google Organization, with any tool that supports MSI.

Google Cloud Storage

For secure print convenience, from any device to any printer, or additional document security, you can enable storage of pending documents in your secured Google Cloud Storage.
